ACKNOWLEDGEMENTS

In completing this semester 1 project, I have been fortunate to have help, support and encouragement from many people. I would like to acknowledge them for their attributions to my project.

First and foremost, I'm deeply thankful to Mr Eche, our Instructor at Aptech Ota, for his magnificent guidance given to me and my fellow mates during this project work. I am also thankful for his continuous reviews and feedback during the course of this project.

I would like to thank other Instructors for their contributions and criticisms received during the course of the project, it helped to rectify our mistakes.

I would also like to thank Aptech team for a chance at attempting such a project. The experience was mind-blowing.

Design And Implementation of eProject Specification

eProject Synopsis

In today's fast-changing business environment, it's extremely important to be able to display your business to the world, and respond to client needs in the most effective and timely manner. If your customers wish to, they will see your business online and have instant access to your products or services.

Most clients don't have the time to visit local stores anymore and are fast settling to online markets.

The project's objective is to develop a basic website where a user is able to view the products of the company and give feedback about the particular product they want.

In order to develop this website, a number of technologies were studied and understood. These include HTML (Hyper-Text Markup Language), CSS (Cascading Style Sheet and programming language (such as JavaScript). Frameworks such as Bootstrap and libraries such as jQuery, owl carousel and others were implemented in the design of this website.

This document will discuss each of the procedures and the qualities involved in this

project. **Hardware/ Software Requirements**

Hardware

- A minimum computer system that will help you access all the tools in the courses is a Pentium 166 or better
- 64 Megabytes of RAM or better

Software

❖ Notepad/HTML editor
❖ Dreamweaver
❖ IE 5.0/ Netscape 6.0
